SUMMARY

Software engineer with 1+ year of experience building distributed backend systems, production grade REST APIs, and high throughput data pipelines for a live fintech platform using Java, Spring Boot, and MySQL. Delivered measurable production impact: 90% latency reduction, 75% faster batch processing, and 100% elimination of manual KYC handling. Skilled in microservices design, DevOps, cloud deployment, and system debugging. Solved 300+ LeetCode problems with a contest rating of 1,446.

EXPERIENCE

Ezfinanz - FinTech / NBFC

Junior Software Engineer, Full-time

Hyderabad, India

Sep 2025 - Present

- Architected an asynchronous bulk disbursement pipeline with two level approval workflows and per-loan distributed locking, cutting transaction commit latency by 90% from 500ms to 50ms and processing concurrent loan disbursements without blocking the request thread
- Refactored the penal charge batch scheduler from sequential to parallel multithreaded execution, reducing full portfolio processing time from 8 hours to 2 hours, a 75% throughput improvement, with zero infrastructure changes
- Engineered a digital KYC service with security first identity cross-validation via fuzzy name matching against the PAN API, eliminating 100% of manual document handling and serving as a fallback across all onboarding journeys when central KYC fails
- Resolved 8+ critical production failures through log and thread level root cause analysis with same-day fixes; maintained full backend ownership across REST APIs, Hibernate ORM, and MySQL schema as one of two engineers on a live product

Ezfinanz - FinTech / NBFC

Junior Software Engineer, Internship

Hyderabad, India

Feb 2025 - Aug 2025

- Implemented 5+ backend features across data retrieval, filtering, and reporting workflows with optimized SQL queries and participated in 3+ production support cycles covering issue triage, hotfix deployment, and post deployment validation

Edubot Software Services

Web Development Intern

Vijayawada, India

May 2024 - Jul 2024

- Delivered 2 full stack web modules using Java and JDBC within sprint deadlines, resolving 15+ bugs through structured QA and testing cycles

PROJECTS

Distributed Loan Management System - Java, Spring Boot, MySQL, Docker, REST APIs, JWT

- Designed a cloud ready microservices backend with 4 independent Spring Boot services for user management, loan processing, disbursements, and notifications - each exposing versioned REST APIs with JWT authentication, centralized logging, and Dockerized for consistent cloud deployment via a single compose command

Real-Time Event Processing Pipeline - Java, Spring Boot, Apache Kafka, MySQL, Docker

- Built an event driven data pipeline using Apache Kafka to process 10,000+ events per minute across producer, consumer, and processor services - supports distributed computing patterns with fault tolerant message delivery and consumer group scaling

DevOps Automation and Monitoring Platform - Python, GitHub Actions, Docker, Prometheus, Grafana

- Implemented a full CI/CD pipeline with automated build, test, and Docker deployment stages using GitHub Actions; integrated Prometheus metrics collection and Grafana dashboards for real-time service health visibility across environments

SKILLS

Languages: Java, Python, SQL, C, JavaScript

Backend and Microservices: Spring Boot, REST APIs, Hibernate ORM, Multithreaded Processing, Microservices, Apache Kafka, Web Services

Cloud and DevOps: Docker, GitHub Actions, CI/CD Pipelines, Linux, Cloud Deployment, Distributed Computing

Observability and Security: Prometheus, Grafana, JWT Authentication, Security First Design, Centralized Logging

Databases: MySQL, SQL Query Optimization, Schema Design

Testing and Tools: Unit Testing, Integration Testing, Postman, Git, GitHub

Core Skills: System Design, Full Stack Development, API Design, Performance Optimization, Production Debugging, OOP, Data Structures and Algorithms

EDUCATION

RGUKT Nuzvid

B.Tech in Computer Science and Engineering - CGPA: 8.9 / 10

2021 - 2025
